

Asset Inventory Service

Find, manage and analyze your OT inventory

Automatically obtain an always up-to-date overview of your OT assets to be managed and secured

- **Asset management**
- **Asset detection**
- **Risk & vulnerability score**

What does it do?

- Manage all your OT assets
- Automatic asset detection
- Asset data enriched with information from versiondog
- Asset risk score
- Gain detailed information about your assets (e.g. Firmware versions)
- Risk & vulnerability report
- Find devices not yet integrated into versiondog

What are the benefits?

- Increases OT inventory visibility for better patch level management
- Reduces manual work adding devices to asset management
- Optimizes OT inventory processes by centralizing information access
- Better decision making due to aggregated data
- Includes versiondog compatibility for enhanced efficiency
- Increased visibility ensures for more effective governance
- Reduction of production downtime due to enhanced vulnerability detection
- Quality of decisions and speed of decision-making significantly improved due to centralized information access

Are there any requirements or costs?

- Active Asset Inventory Service license required
- Active versiondog server license required
